Crash Investigation 1

Frankfort Police Department

20602 Lincoln-Way Lane, Frankfort, IL 60423

Monday- Friday, January 31 – February 11, 2022

8:00 am till 4:00 pm

This course complies with the guidelines of the following mandate(s):
PENDING

Course Description: In most jurisdictions, traffic crashes account for more lives lost, more injuries and more property damage than all criminal activity combined. To effectively implement crash prevention programs and improve quality of life, law enforcement agencies need to know the who, what, where, when and why of crash occurrence.

The moments immediately following a traffic crash are crucial, and only a well-trained crash investigator knows how to identify and collect the necessary information at the crash scene and to begin the interpretation of that evidence.

Crash investigators must work quickly and confidently to preserve significant physical results before the crash scene is altered or evidence disappears. They must anticipate what information will be needed for enforcing traffic laws, planning crash prevention programs and possible case litigation. In addition, they must properly document the at-scene information and evidence because once the scene is cleared, the evidence might be impossible to recover.

Crash Investigation 1, based on J. Stannard Baker's world-renowned text, Traffic Crash Investigation, is an in-depth study of the skills needed to systematically investigate a traffic crash. Techniques for recognizing and properly recording roadway and vehicle crash evidence are thoroughly presented. Students learn to take measurements and photographs of the crash scene and to create sketches and after-crash diagrams. Crash Investigation 1 also addresses how the collected data are used to reconstruct crashes. Finally, the use of electronic devices to collect and record at-scene data is also introduced.

Course Topics:

- Preparation for traffic crash investigation
- Information from and about people
- Information from vehicles
- Information from roads
- Measuring and mapping the crash scene
- Photographing the crash scene and damaged vehicles
- For this updated program, students will develop a new case study. Photographs and exhibits have been updated, and classroom instruction now includes how the latest generation of vehicle electronics - including data recorders, traction and stability controls, multiple airbags, etc. - affect both the crash and the crash investigation
